

Components

api_client

The `APIClient` class provides a structured way to interact with an API for retrieving company profiles, filing histories, and document metadata while handling authentication and rate limiting internally.

config

This configuration file centralizes the settings and parameters used throughout the application, allowing for easy adjustments and management of the application's behavior and data processing routines.

file_manager

Overall, the `FileManager` class provides a robust and reliable way to manage file operations within the application, with a focus on downloading PDFs and handling common issues that may arise during this process.

main

This script orchestrates the workflow for downloading, OCR processing, and analyzing financial documents of a specified company. It uses various helper classes and functions to achieve these tasks efficiently and manages the sequence of operations based on configuration settings.

ocr

The `OCR` class encapsulates the functionality needed to process PDFs using OCR, making them searchable and easier to analyze for text content. This class is a crucial part of a larger workflow that involves managing, processing, and analyzing PDF documents.

pdf_search

This file only contains the `search_pdf_and_output_to_csv` function. It is designed to automate the process of searching for specific terms within PDF documents and recording the results in a structured CSV format, facilitating further analysis and reporting.

rate_limiter

Overall, the `RateLimiter` class is designed to help manage and control the rate of API requests, ensuring compliance with rate limits and avoiding disruptions caused by exceeding allowed request thresholds. It is a crucial component to avoid being rate limited by the API service provider.

FAQ

How do I add new company ids?

1. Open the program "VSCode".

2. In the top left corner click on “File” → “Open Folder” → “S:\Users\Hiwi\Plastic Tax\UK-company-filings-analysis” → “Select Folder”.
3. You should now be able to see the primary sidebar on the left side with a bunch of folders and files (if not, toggle the primary sidebar in the top right corner).
4. Select “data/company_ids.csv”.
5. In the second line of the file you can add your new company ids.
Note: Each company id has to be in its own line.

How do I set up the configuration file?

1. Open the program “VSCode”.
2. In the top left corner click on “File” → “Open Folder” → “S:\Users\Hiwi\Plastic Tax\UK-company-filings-analysis” → “Select Folder”.
3. You should now be able to see the primary sidebar on the left side with a bunch of folders and files (if not, toggle the primary sidebar in the top right corner).
4. Select “src/config.py”
5. In this file are four variables which can be changed:
 - a. `SEARCH_TERMS`: This list contains the keywords by which the PDF documents are searched. You can add here as many keywords as you like.
Note: Keywords must be inside of “ ” and separated by a comma.
 - b. `DOWNLOAD_FINANCIALS`: This can only be equal to “False” or “True”. When main.py is being executed and this variable set to “True” then all the available financial reports of the input company ids are being downloaded and stored in “data\downloaded_pdfs”.
Note: Only set this to “True” if you added new company ids to company_ids.csv file.
 - c. `OCR_PDFS`: This can only be equal to “False” or “True”. When main.py is being executed and this variable set to “True” then all the available financial reports in “data\downloaded_pdfs” are made searchable and stored in “data\searchable_pdfs”.
Note: Only set this to “True” if you added new company ids to company_ids.csv file.
 - d. `ANALYZE_PDFS`: This can only be equal to “False” or “True”. When main.py is being executed and this variable set to “True” then all the available financial reports in “data\searchable_pdfs” are being searched by the defined `SEARCH_TERMS`.
Note: Only set this to “True” if you added new search terms to the SEARCH_TERMS list.

How do I execute the script?

1. Open the program “VSCode”.

2. In the top left corner click on “File” → “Open Folder” → “S:\Users\Hiwi\Plastic Tax\UK-company-filings-analysis” → “Select Folder”.
3. You should now be able to see the primary sidebar on the left side with a bunch of folders and files (if not, toggle the primary sidebar in the top right corner).
4. Select “src/main.py”.
5. Press the little play button in the top right corner to execute the file.

Where do I find my results?

1. You can find the resulting .csv file in “S:\Users\Hiwi\Plastic Tax\UK-company-filings-analysis\data\term_counts.csv”
